

# LIFTRA CARRIERS

EFFICIENT HANDLING OF COMPONENTS  
FLEXIBLE AND PRECISE MOVEMENT

## LT GANTRY CARRIER

Liftra Gantry Carriers deliver safe and efficient handling of components. As an alternative to large trucks and cranes that often requires reloading, the LT Gantry Carrier works in all areas inside and outside within a minimum of driving space. The Gantry Carrier is improving flow in production.

- Precise positioning.
- Turns around its own axis.
- Drives parallel or sideways.

## LT FORK CARRIER

LT Fork Carrier for hub. Used for lifting and local transport of 2MW and 3MW hubs.

30t

LT Fork Carrier. Battery driven, which gives a very low noise emission. The traction and lift is hydraulic driven and has servo steering.

10t

## HYDRAULIC LASHING

The load is secured by use of remote controlled hydraulic lashing.

Very short distance between load and legs of the carrier enabling effective and tight positioning of loads.

## EXTRAS

Power to yoke is shown as an example of an added feature.

Other examples include:

- Hydraulic outlet for yoke.
- Turnable shackle.
- Light on yoke.

## EFFECTIVE

A Liftra Carrier is an effective and safe solution to internal transport of heavy components. Move inside, outside and between production facilities with no trouble. No emission, low noise.

- Battery driven.
- Low noise.
- No exhaust.
- Indoor and outdoor use.
- 2 - 4 km/h.
- 10 - 40t.

# FULL CONTROL

All LT Carriers from Liftra are remote controlled via a simple interface.

# CUSTOM MADE

LT Carriers can be produced as a standard product or be modified to client specifications, in cooperation with LIFTRA's team of skilled engineers.

The shown Gantry Carrier is WLL 90 ton. Liftra develops and produces carriers in a range starting at WLL 10 ton and upwards.
